

WellFix with nubs

Slightly wavelike, PVC-free spacer with nubs for use in precast work.

Nubs on the top avoid the moving of reinforcement during concreting.

Quick and easy shortening is possible without any tool in a 30 cm grid.

Less and small contact points on the formwork gives slight visible imprints on the precast concrete element.

Tilt-proof due to a width of 40 mm. The form of the spacer guarantees an efficient packaging without distortion.
